Abhishek Kumar Yadav

Full-Stack Web Developer | Python & Django Backend | RESTful APIs
abhishekkumary638@gmail.com | +91-9558401418 | Jaipur, Rajasthan
linkedin.com/in/abhishek9558 | github.com/krabhishek9

Professional Summary

Full-Stack Web Developer specializing in Python backend architecture (Django, Django REST Framework) and responsive frontend interfaces. Experienced in designing relational database schemas, engineering scalable RESTful microservices, and automating data processing pipelines. Proven track record delivering production-grade web solutions and completed industry internship in Python Full-Stack Development.

Education

Jagan Nath University Jaipur, India
B.Tech in Computer Science and Engineering Jul 2023 – Expected Jul 2027
Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks

Technical Skills

- **Languages:** Python (DSA), C++, SQL, JavaScript (ES6+), HTML5, CSS3
- **Backend Development:** Django, Django REST Framework (DRF), ASGI/WSGI, Class-Based Views (CBVs), Serializers, RESTful APIs, ORM
- **Frontend Development:** JavaScript (DOM Manipulation), Responsive Design, UI Components, CSS Grid/Flexbox, Event Handling
- **Databases & Storage:** SQLite, MySQL, Relational Database Modeling, Foreign Key Constraints, Schema Migrations
- **Tools & Libraries:** Git, GitHub, Python rembg, Pillow (PIL), Postman, VS Code, Linux/Bash, Virtual Environments

Experience

ApexPlanet Software Pvt Ltd Remote
Python Full Stack Development Intern Jun 2026 – Aug 2026 | Certificate
- Architected end-to-end full-stack web applications utilizing Python, Django, and modern frontend technologies across an 8-week production lifecycle.
- Implemented RESTful API endpoints with structured serialization, validation schemas, and database query optimization for scalable data handling.
- Collaborated on database schema design, migration workflows, and cross-browser responsive UI integrations aligned with client specifications.

Projects

Hospital Appointment Management API System GitHub
Python, Django 5, Django REST Framework, SQLite, ModelSerializers, Class-Based Generic Views
- Engineered a multi-tiered RESTful backend system handling hospital appointments, patient profiles, contact details, and payment tracking.
- Designed relational database models using Django ORM with cascading foreign-key relationships ensuring high referential integrity across entities.
- Developed modular CRUD endpoints utilizing DRF generic class-based views (`ListCreateAPIView`, `RetrieveAPIView`, `DestroyAPIView`) and automated serializers.
- Implemented structured status-tracking enumeration for transaction reconciliation (`success`, `cancel`, `pending`) with validation filters.

E-Commerce Web Application (Mini Amazon Showcase) GitHub
JavaScript (ES6+), CSS3 Flexbox/Grid, Semantic HTML5, Dynamic UI/UX Design
- Built an interactive e-commerce product showcase application featuring real-time interactive carousels, category filtering, and product swatch variations.
- Implemented dynamic DOM state transitions, automated autoplay intervals with hover-pause detection, and full keyboard navigation support.
- Structured modular pricing calculation cards displaying unit prices, multi-currency conversions (USD/INR), bulk discount tiers, and EMI breakdowns.
- Optimized frontend asset delivery and fluid CSS media queries, delivering full responsiveness and zero-layout-shift performance across mobile and desktop.

Automated Background Removal & Image Processing Service GitHub
Python 3, rembg, Deep Learning Pretrained Segmentation Models, Binary Stream Processing
- Developed an automated image utility pipeline using Python to perform high-precision background extraction and alpha-channel transparency masking.
- Implemented efficient binary byte-stream file I/O operations enabling fast processing and low memory overhead for high-resolution PNG outputs.
- Configured reusable script architectures for bulk image asset processing pipelines suitable for e-commerce catalog prepress workflows.
